

## My Ideal Road Bike:

Measurements as shown for bike rental or purchase.

<u>Frame Material</u> : carbon fiber	<u>Top Tube Length</u> : ~56 cm <sup>2</sup>
<u>Frame Size</u> : 58 cm <sup>1</sup>	<u>Handlebar Stack</u> : 68 to 70 cm
<u>Frame Stack</u> : 58 to 63 cm	<u>Handlebar Reach</u> : 48 cm
<u>Frame Reach</u> : 39 to 40 cm	<u>Pedal Reach</u> : 97 cm
<u>Seat/Saddle Height</u> : 102.5 to 103 cm	<u>Crank</u> s: 172~175 mm

### Other Measurements, Not Shown:

- Bottom Bracket (BB) Centerline (CL) to Top of Saddle:  $\cong$  79 cm along seatpost CL.
- Saddle to Bars: 70 cm<sup>3</sup>
- Bar to Dropout: 63 to 64 cm<sup>4</sup>

Continued...

<sup>1</sup> Method of measurement/specification may vary by manufacturer—especially with compact frames—but 58 cm generally works best for me.

<sup>2</sup> Nominal measurement on moderately compact frames from centerline “CL” of head tube to CL of seat tube.

<sup>3</sup> From the center of saddle (where seatpost CL would pass through) to CL of handlebars.

<sup>4</sup> From front center of handlebars to fork dropout (front axle).

## Equipment Preferences:

*(not requirements, just preferences)*

Frame: "Sportif" geometry preferred over race geometry for softer, touring ride.

Gearing: **Lowest gear no harder (bigger) than 1:1** for steep climbing over long distances, please. I love to climb but I'm not a strong or fast climber. Thank you!

Brakes: Hydraulic disc

Derailleurs: Shimano or SRAM, but I can re-learn Campy, too!

## Rider Body/Fitness:

Inseam: 90 cm | Height: 185 cm | Weight: 185 lb / 84 kg | Jersey: L | Bib Shorts: XL |  
Born: 1958

Typical Training Rides: 50 km, 2-3 times a week.

▷ Strava Profile: <https://www.strava.com/athletes/61596>

## Miscellaneous Relative Measurements:

*(for my own fine-tuning, if needed)*

Saddle-to-handlebar spacing (subject to saddle<sup>5</sup> length):

- From back of saddle to handlebar centerline: 82½ to 84 cm
- From saddle tip/front/nose to handlebar centerline: 54½ to 57 cm

Handlebar Height (as measured from centerline of top portion of bar) is about 10 cm lower than saddle height (as measured from the top of the nose of the saddle).

Center of seat is about 21 cm behind bottom bracket centerline (using plumb line).

With 25c tires on 700c rims, the bottom bracket  $\phi$  is 27.8 cm above the ground.

---

<sup>5</sup> Based on Selle Italia men's Max Flight Gel Flow racing saddle, approximately 28½ cm long.
